Middle Chinese

The vast majority of phonological material in Cantonese can be traced to Middle Chinese

“Early Middle Chinese” in Chinese historical phonology:

《切韻》 qièyùn / cit3 wan5 (rime book; 601 隋)

Only parts of it have survived; but there are many augmented versions

e.g. 《廣韻》 guǎngyùn / gwong2 wan5 (1008; official rime book of 宋)

Author of 《切韻》: 陸法言 lù fǎyán / luk6 faat3 jin4 鮮卑

隋 Suí (581-618) unified China in 589 CE after $\approx$ 300 years of disunity

Eight scholars (friends of 陸法言's father) were trying to create a new unified standard, based on a compromise of the “best” pronunciation of characters from the old northern and southern standards

Middle Chinese

切韻卷第四 去聲 五十六韻

凍 瀑 [雨] 又水名出發
鳩山 多貢反 三

[粵 多 do1 貢 gung3]

[MC 多 ta^A 貢 ku^wŋ^C =
tu^wŋ^C]

凍 冰

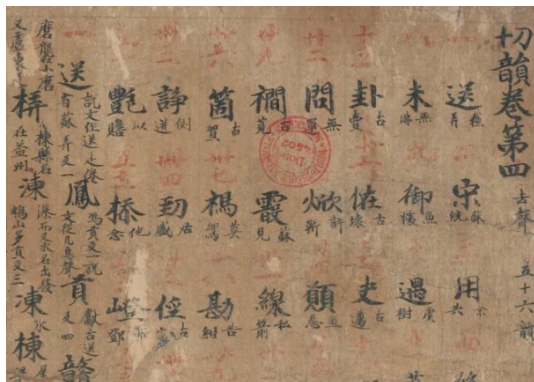

棟 屋梁

[XY 反, later XY 切]

Hence the name of this

method: 反切 faan2 cit3 ~

faan1 cit3 / fǎnqiè]

Middle Chinese

國 際 音 標 方 言 點	編 號	1911
	漢 字	法
	中 古 音	方法
	音 標	咸合三 入乏非
北 京	fa ²¹⁴	
廣 州 (市 區)	fat ³³	
香 港 (市 區)	fat ³³	
香 港 (新 界 錦 田)	fæk ³⁵	
澳 門 (市 區)	fat ³³	
番 禺 (市 橋)	fat ³³	
花 縣 (花 山)	fat ³³	
從 化 (城 內)	fat ²³	
增 城 (縣 城)	fak ³³	
佛 山 (市 區)	fat ³³	
南 海 (沙 頭)	p'et ³³	

法：咸合三入 乏非

- 咸：咸攝 (-am/-ap), 1 of 16 groups of finals
- 合：合 “rounded” vs. 開 (non-rn)
- 三：1234 “divisions” of finals
- 入：平上去入 Tones ABCD
- 乏：乏 -jəp^D final (廣韻 has $57^A + 55^B + 60^C + 34^D = 206$ finals)
- 非：非 pf- [LMC], 1 of about 40 initials
(非乏 pfjəp^D)

Middle Chinese

Transcriptions of Middle Chinese:
do not carry * (because not reconstructions)

Various transcription systems of MC, e.g.
Baxter's transcription for Middle Chinese

https://en.wikipedia.org/wiki/Baxter%27s_transcription_for_Middle_Chinese

Hill's Indological transcription of Middle Chinese

<https://doi.org/10.1163/19606028-bja10028>

Here, my own transcription of MC is used
(mostly based on Baxter's)

MC Tones

sonorant-ending			-p -t -k
A 平 'Level' ㄅㄟ	B 上 'Rising' ㄅㄟ	C 去 'Departing' ㄅㄟ	D 入 'Entering' ㄅㄟ
bjæŋ ^A ping4 píng	dʒjaŋ ^B soeng5 shǎng	k ^{hiə} ^C heoi3 qù	nip ^D jap6 ⁽⁹⁾ rù

[https://en.wikipedia.org/wiki/Four_tones_\(Middle_Chinese\)](https://en.wikipedia.org/wiki/Four_tones_(Middle_Chinese))

MC Tones

Tone splitting:

e.g. Proto-Yue

/taj^C/ [taj˥]

/daj^C/ [daj˥]

tone-splitting may occur:

/taj^C/ [taj˥]

/daj^C/ [daj˥] (voiced onset lowering pitch)

In most, but not all, Sinitic languages, voiced initials have become voiceless

tone-splitting becomes phonemicised:

/taj^{C1}/ /taj˥/ Canto. 帶 daai3

/taj^{C2}/ /taj˨/ Canto. 大 daai6

cf. Cantonese tone 3 /˥/ 6 /˨/ both descended from MC tone C

cf. Standard Mandarin where MC tone C has not split:

帶 dài, 大 dài (as in 大夫 dài fu)

MC Tones

	* 平 *A	* 上 *B	* 去 *C	* 入 *D	
				長 L	短 S
陰 *voiceless 清 initial	1 ˩(˨˩)	2 ˩˨˩	3 ˩	3 ˩	1 ˩
陽 *voiced sonorant 次濁 initial	4 ˩˨˩	5 ˩	6 ˩	6 ˩	
陽 *voiced obstruent 全濁 initial					

Table 1: Tones in Standard Cantonese

	* 平 *A	* 上 *B	* 去 *C	* 入 *D
陰 *voiceless 清 initial	1 ˩	3 ˩	4 ˩	<i>random</i>
陽 *voiced sonorant 次濁 initial	2 ˩			4 ˩
陽 *voiced obstruent 全濁 initial				2 ˩

Table 2: Tones in Standard Mandarin

MC Tones

Examples of 全濁上歸去：

倚 MC gie^B ‘to stand’

Mand. ji4 ^(C)

Canto. kei5 ^(B2) 企 (MC khie^B) for ‘to stand’ is etymologically wrong

被 MC bie^B ‘to cover’

Mand. bei4 ^(C)

Canto. pei5 ^(B2) ‘quilt’; bei6 ^(C2) PASS

技 MC gie^B ‘technique’

Mand. ji4 ^(C)

Canto. gei6 ^(C2)

(cf. HK Hakka ki3 ^(B) Hakka has kept this character in tone B)

MC Tones

Lower tone D:

月 MC ɲwɟət^D ‘moon’

Canto. jyut6^(D2)

Mand. yue4^(C)

別 MC bjet^D ‘to part’

Canto. bit6^(D2)

Mand. bie2^(A2)

MC Tones

平 A	上 B	去 C	入 D
舒聲 smooth			入聲 checked
syu1 sing1			jap6 sing1
shū shēng			rù shēng
平聲 level	仄聲 oblique		
ping4 sing1	zak1 sing1		
píng shēng	zè shēng		

MC Tones

〈登鶴雀樓〉王之渙 688–742 唐/周/唐

白 日 依 山 盡	仄 仄 平 平 仄
黃 河 入 海 流	平 平 仄 仄 平
欲 窮 千 里 目	仄 平 平 仄 仄
更 上 一 層 樓	仄 仄 仄 平 平

MC initials & Late Middle Chinese

Early Middle Chinese: 《切韻》 qièyùn / cit3 wan5 (601 隋)
(artificial: compromise between N and S Standard Chinese)

Organised by tones and finals
no organised information on the initials

Late Middle Chinese: rime tables 韻圖 yùntú / wan5 tou4
《韻鏡》 yùnjìng / wan5 geng3 ≈10th c 五代; 1161 南宋 ed.)
《七音略》 qīyīnlüè / cat1 jam1 loek6 (before 1161 南宋)

information on tones and finals: basically the same as 《切韻》
information on initials: current (10th century)

(There are rime tables like 《四聲等子》 (1039 北宋) and 《切韻指掌圖》
(1230 南宋) which reflected pronunciation at the time better)

MC initials & Late Middle Chinese

Early MC initials

Initials in Early Middle Chinese:

Information not displayed systematically in 《切韻》

陳澧 can4 lai5 / chén lǐ (1810—1882 Canton)

《切韻考》 he worked from 《廣韻》, ignored characters that were not in 《切韻》

「系聯法」 xìliánfǎ / hai6 lyun4 faat3, e.g.

(19th century Cantonese:)

深 šam1: 式 šik1 針 žam1 切

式 šik1: 賞 šoeng2 職 žik1 切

賞 šoeng2: 書 šyu1 兩 loeng5 切 etc...

i.e. 深式賞書... share the same initial

Discovery: EMC 《切韻》 Initials ≠ LMC rime table Initials

Early MC initials

全清	次清	全濁	全清	全濁	次濁	次濁
幫 [幫] bong1 [p] bāng	滂 pong1 [pʰ] pāng	並 [並] bing6 [b] bìng			明 ming4 [m] míng	
端 dyun1 [t] duān	透 tau3 [tʰ] tòu	定 ding6 [d] dìng			泥 nai4 [n] ní	來 loi4 [l] lái
知 zi1 [tʃ] zhī	徹 [徹] cit3 [tʰ] chè	澄 cing4 [dʒ] chéng			娘 noeng4 [ŋ] niáng	
精 zing1 [ts] jīng	清 cing1 [tsʰ] qīng	從 [从] cung4 [dz] cóng	心 sam1 [s] xīn	邪 ce4 [z] xié		
莊 [庄] zong1 [tʃʒ] zhuāng	初 co1 [tʃʰ] chū	崇 sung4 [dʒʒ] chóng	生 sang1 [ʃ] shēng	俟 zi6 [z] sì		
章 zoeng1 [tʃʒ] zhāng	昌 coeng1 [tʃʰʒ] chāng	常 soeng4 [dʒʒ] cháng	書 [书] syu1 [ʃʒ] shū	船 syun4 [ʒ] chuán	日 jat6 [ɲ] rì	以 ji5 (0j) yǐ
見 gin3 [k] jiàn	溪 kai1 [kʰ] xī	羣 [群] kwan4 [g] qún			疑 ji4 [ŋ] yí	
影 jing2 [ʔ] yǐng			曉 [晓] hieu2 [h] xiǎo	匣 hap6 [ɦ] xiá		云 wan4 (ɦj) yún

Early MC initials

Some notes:

- not all were phonemically contrastive, e.g. 泥 [n] 娘 [ŋ] were in complementary distribution
- in Canto., 清 voiceless = high tone, 濁 voiced = low tone (MC 全濁 voiced obstruents have become voiceless)
- Traditional 並 > Simplified 并; but linguists in Mainland China writes MC initial [b] as 並 (Simp. 并 < Trad. 并 MC [p] or 併 [p/b] or 並 [b])
- 俟 MC [z] only has two characters (俟𪔐) in 切韻, both merged into 崇 [dʒ] in 廣韻 (so [z] is often ignored)
- (excluding 俟 [z]) In Cantonese, MC retroflex 莊初崇生 (zong1 co1 sung4 sang1) often have back vowels
MC palatal 章昌常書船 (zoeng1 coeng1 soeng4 syu1 syun4) often have front vowels (rules not 100%)

Late MC initials

全清	次清	全濁	全清	全濁	次濁	次濁
幫 [幫] bong1 [p] bāng	滂 pong1 [pʰ] pāng	並 [並] bing6 [bʰ] bìng			明 ming4 [m] míng	
非 fei1 [f] fēi	敷 fu1 [f] fū	奉 fung6 [vʰ] fèng			微 mei4 [ŋ] wéi	
端 dyun1 [t] duān	透 tau3 [tʰ] tòu	定 ding6 [dʰ] dìng			泥 nai4 [n] ní	來 loi4 [l] lái
知 zi1 [t] zhī	徹 [徹] cit3 [tʰ] chè	澄 cing4 [dʰ] chéng			娘 noeng4 [ŋ] niáng	
精 zing1 [ts] jīng	清 cing1 [tsʰ] qīng	從 [从] cung4 [dzʰ] cóng	心 sam1 [s] xīn	邪 ce4 [zʰ] xié		
照 ziu3 [tʂ] zhào	穿 cyun1 [tʂʰ] chuān	牀 [床] cong4 [dʒʰ] chuáng	審 [审] sam2 [ʂ] shěn	禪 [禅] sim4 [ʐʰ] chán	日 jat6 [ʌ] rì	
見 gin3 [k] jiàn	溪 kai1 [kʰ] xī	羣 [群] kwan4 [gʰ] qún			疑 ji4 [ŋ] yí	
影 jing2 [ʔ] yǐng			曉 [晓] hui2 [h] xiǎo	匣 hap6 [ɦ] xiá		喻 jyu6 (0j) yù

Late MC initials

Some notes:

- voiced obstruents became breathy, and were on their way to become voiceless (in Northern Chinese)
- labiodentals 非敷奉微 developed out of bilabials 幫滂並明 (輕唇 hing1 seon4 vs. 重唇 cung5 seon4 respectively)
- 微 TW Mand. wéi, BJ Mand. wēi. However, when referring to the MC initial 微, N Chinese people may change their pronunciation to 微 wéi
- 非敷 were earlier [pf] [pʰ]; soon they merged to [f]
- Cantonese usually have /f/ for 非敷奉;
but some /p//pʰ/ are retained, e.g.
番 faan1 but 番禺 pun1 jyu4 (Pānyú)
伏 fuk6 but 伏匿匿 buk6 nei1 nei1 ‘hide and seek’

Late MC initials

- In Cantonese, LMC [f/v] 非敷奉 have developed, but LMC [m] 微 (Mand. [v] 微) has not (between EMC and LMC; $\approx 9^{\text{th}}-10^{\text{th}}$ C, late 唐 / 5 代)
- MC [t][tʰ][d] 知徹澄 have become Cantonese [ts][tsʰ] some exceptional plosive reflexes e.g. 秩 dit6 (cf. Mand. zhì)
- MC 知 [t] 照 [tʂ] series > Mand. [tʂ][tʂʰ][ʂ]
MC 精 [ts] series > Mand. [ts][tsʰ][s] or [tʃ][tʃʰ][ʃ]
Canto. all > [ts][tsʰ][s]; but the distinction existed earlier e.g. 牛池灣 Ngau Chi Wan (ngau4 či4 waan1) vs. 慈雲山 Tsz Wan Shan (cz4 wan4 šan1) (now both ci4)

Late MC initials

- MC 精 [ts] vs. 見 [k]:
Cantonese : 精 [tsɛŋ˧], 見 [kin˧˥]
BJ opera: 精 [tsin˧˥], 見 [tɕjɛn˨˩˦] (「分尖團」 zīān tuán)
BJ Mand.: 精 [tɕi˨˩˦], 見 [tɕjɛn˧˥] (「不分尖團」)
- MC [k^h] 溪: Canto. [k^h] / [h]
e.g. MC k^həj Canto. 慷^{C1} [k^hɔj˧˥] 開^{A1} [hɔj˧˥]
(with MC -w-) [k^{wh}] / [f]
e.g. MC k^hwəj Canto. 盍^{A1} [k^{wh}ɐj˧˥] 魁^{A1} [fuj˧˥] 傀^{B1} [faj˧˥]
- MC [ŋ] 疑 has remained [ŋ] in front non-high vowels
e.g. 牙 [ŋa˧˥] 牛 [ŋew˧˥] 我 [ŋɔ˧˥] 傲 [ŋou˧˥]

(etc.)

MC initials

MC voiced plosives / affricates: 並 b 定 d 澄 ɖ 從 dz 牀 ɖʐ 羣 g
e.g. MC [b] > [b]? [p]? [pʰ]? (something else?)

MC >	牌 bɛ ^A ‘placard’	被 bje ^B ‘quilt’	病 bjæn ^C ‘sickness’	白 bæk ^D ‘white’
全州湘	bāj ^{A2}	bi ¹ ^C	biŋ ¹ ^C	bə ¹ ^{A2}
南寧平	paj ¹ ^{A2}	pəj ¹ ^{B2}	pən ¹ ^{C2}	pək ¹ ^{D2b}
柳州官	p ^h aj ¹ ^{A2}	pi ¹ ^C	pjen ¹ ^C	pə ¹ ^{A2}
廣州粵	p ^h aj ¹ ^{A2}	p ^h ej ¹ ^{B2}	pɛŋ ¹ ^{C2}	pak ¹ ^{D2}
香港客	p ^h aj ¹ ^{A2}	p ^h i ¹ ^{A1}	p ^h jaŋ ¹ ^C	p ^h ak ¹ ^{D2}

MC initials

Cantonese: AB aspirated, CD unaspirated

Mandarin: 「平送 仄不送」 i.e. A aspirated, BCD unaspirated
not entirely correct:

Standard Mand.	* 平 *A	* 上 *B	* 去 *C	* 入 *D
陰 *voiceless 清 initial	1 ˩	3 ˨˩˦	4 ˨˩˦	<i>random</i>
陽 *voiced sonorant 次濁 initial	2 ˨˩˦			4 ˨˩˦
陽 *voiced obstruent 全濁 initial				2 ˨˩˦

Few cases of *voiced obstruent initial still in tone B:

艇 t^hij˩˦^B (MC den˩˦, Canto. teng5)

勉強 mjen˩˦ / tɕ^hjaŋ˩˦^B (MC gjaŋ˩˦, Canto. koeng5)

窈窕 jao˩˦ / t^hjao˩˦^B (MC dew˩˦, Canto. tiu5)

否極泰來 p^hi˩˦˩˦^B tɕi˩˦ t^haj˩˦ laj˩˦ (MC bij˩˦, 蘇州吳 /bi˩˦/C2)

i.e. same as Cantonese: AB aspirated, CD unaspirated

MC initials

The trait of AB aspirated, CD unaspirated:

Cantonese got this pattern from Early Mandarin

13th century wars between Song China and the Mongols: Huge waves of refugees from/via Jiangxi arrived in the Pearl River Delta, bringing with them (native or non-native) Mandarin. Canto. and many Yue dialects inherited this immigrant pattern.

The older pattern in Yue/Pinghua is ABCD unaspirated
